Cool temperatures and bright light is the prescription for success with cyclamen. Place this flowering plant in an east window. A daytime temperature of 60 to 65° F and a night time minimum temperature of 50° F should keep it blooming well into next year.

The white, red or pink flowers grow tall with nodding stems above the rosette of heart-shaped, blue-green to dark green leaves. The foliage is marked with white veins and light green splotches.

Water the cyclamen whenever the soil begins to feel dry and try to keep the soil around the roots moist at all

times. Water with lukewarm water and be careful to keep it off the foliage and crown as the plant is very susceptible to crown rot.

Fertilize the plant with a houseplant fertilizer using one-half the recommended strength every two weeks while it is flowering. When new flowers cease to appear and the leaves turn brown, reduce the frequency and amount of watering and place the pot in a cool spot.

After flowering, let it rest until warm spring weather arrives. Repot in a mixture of equal parts houseplant potting soil and peat moss, with half the crown above the soil. (MJF)
